**Children’s Miracle Network Hospital Program Update**

**2013 Children's Miracle Network Hospitals Champion’s Submission**
The Children’s Hospital Foundation at Saint Francis is pleased to announce that Jonathan Fussell will serve as the 2013 Children’s Miracle Network Hospitals Champion submission for the Tulsa market. Jonathan has recently undergone his second heart transplant and continues to get heart catheterizations and biopsies at The Children’s Hospital at Saint Francis. The Champion program was designed by the CMNH national office as a public awareness program. Its primary function is to generate awareness of Children’s Miracle Network Hospitals and the important work and financial needs of its hospital members. A Champion is selected from each state and honors remarkable children who are serving as children's hospital ambassadors after facing medical challenges. If Jonathan is selected for Oklahoma he will represent the state in all related media opportunities as well as Children’s Miracle Network Hospitals' events at Disney World and Washington, D.C.

**Panda Express Meals on New Year’s Eve**
Patients and their families as well as staff were treated to a free meal from Panda Express on December 31. Panda Express is a Children's Miracle Network Hospital partner and generously donated 300 meals through their Panda Cares program. Panda Express locations also support The Children's Hospital at Saint Francis through their employee-giving campaign that they participate in throughout the year.

**2012 Children’s Miracle Network Fundraising**
Partners of Children's Miracle Network Hospitals raised $367,112 in calendar year 2012. The final deadline to get CMNH funds reported isn’t until January 31 but so far it shows to be an 11% increase from 2011. THANK YOU to all of you who support our Children’s Miracle Network Hospitals corporate and local partner’s campaigns and events!

**The WIND Study for Bronchiolitis**
Children with severe bronchiolitis often develop asthma but the link between these two common conditions is not understood. The WIND study is the largest, federally-funded study seeking answers to this question. Study staff at 10 different hospitals across the nation are enrolling children hospitalized with bronchiolitis and closely following them for the possible development of breathing problems. In the end, the goal is to be able to identify children at high risk for future wheezing and asthma.

The "WIND" in WIND study is short for “Wheezing INDex.” With the information generated from this study, they hope to develop a tool (WIND) that can be used by health providers to improve the care they provide to children.

The sponsoring institution for the WIND study at the Children’s Hospital is the University of Oklahoma—Tulsa. The WIND study is funded by the National Institute of Health (NIH) and is led by the Emergency Medicine Network (EMNet). For more information about the study go to www.windstudy.org.

**Our third annual conference geared to the community physician.**

**2013 Practical Applications in Pediatrics**
Presented by The Children's Hospital at Saint Francis
Friday, April 26, 2013 • 12:00 p.m.—4:00 p.m.
Saturday, April 27, 2013 • 8:00 a.m.—11:30 a.m.
Saint Francis Hospital Education Center • 6161 South Yale

The conference team is working on the agenda. Please contact Ruth Grosserode at 918-494-1192 with ideas or suggestions.
RSV and Flu

Flu, flu, flu and more flu. Every media source is talking about the flu, but what about RSV? While influenza positive tests have outnumbered positive RSV tests, for The Children's Hospital at Saint Francis, RSV has resulted in far more admissions this year than influenza. This is consistent with national data which shows less than 20% of flu hospital admissions for this season coming from the under 18 population.

Traditionally, our peak RSV numbers happen somewhere between the third week of January and the second week of February. This year, our numbers began climbing approximately one month earlier than in previous years. It looks like this year our peak for RSV positive tests happened in the last week of December if the current pattern holds. The actual number of positive tests each year varies greatly, but so far, this year does not appear to be abnormally high. The last week of December this year we had 179 positives which compares with the 2010 high of 177. Other years have ranged around 125.

The Saint Francis Health System Epidemiology Dept. monitors respiratory pathogen occurrences on an ongoing basis. If you have access to the Saint Francis HealthNet, this year’s information as well as historical data from previous years may be found on the Infection Prevention/Epidemiology HealthNet site.

The Children’s Hospital Foundation at Saint Francis

Children’s Foundation Christmas Party
Over 200 guests attended the third annual Christmas party on December 11 hosted by the Children’s Hospital Foundation and America’s CarMart. Refreshments were served and guests took complimentary photos with Santa Claus. Several local performers entertained and LeAnne Taylor from the News on 6 emceed. Local groups providing entertainment or activities for the children were Theatre Arts Tulsa, Tulsa Project Theatre and the cast of Joseph and the Amazing Technicolor Dreamcoat, Philbrook Museum of Arts, Home Depot and Sharon Allred with the art cart. The party was covered by the Tulsa World and the four major news stations.

Christmas Season - Gift in Kind Donations up from 2011
The Children’s Hospital Foundation at Saint Francis saw a 66.52% increase in Gift in Kind donations this Christmas Season. Tulsa and the surrounding area community members generously donated items like new toys, games, puzzles, craft kits, stuffed animals, clothing, coloring books, crayons and toiletries that are all needed to help patients at The Children’s Hospital at Saint Francis in a variety of ways.

Christmas Meal Donated by Chick-fil-A
Tulsa area Chick-fil-A locations provided 275 boxed lunches on Christmas Eve for patients, family and staff at the Children’s Hospital. The boxed lunches were delivered to the floors by Foundation staff and volunteer auxiliary members Donna Jackson, Sue Hayes and Terry Cannon. Chick-fil-A brought their signature “Eat Mor Chikin” cows to visit the patients and the story was covered on the News on 6.

Sweetheart Run
The Fleet Feet Sweetheart Run will benefit CHAMP Camp at The Children’s Hospital at Saint Francis. CHAMP Camp is a camp for children born with congenital heart defects and their siblings. The event will be run on Saturday, February 16, 2012 in downtown Tulsa. Runners can participate with or without their “sweetheart” in a 5K, 10K or fun run. The race begins at 7:45 a.m. at the Fleet Feet Blue Dome location.
Trauma Emergency Center/Patient Bed Tower

Now that the skeleton of the Trauma Emergency Center/Patient Bed Tower is substantially complete, work has continued with the other anatomical portions of the building; mechanical and plumbing representing much of the circulatory system and electrical and low voltage wiring representing the nervous system.

Work continues on the installation of the building’s skin which is comprised of precast concrete panels, metal panels and glass. While this is occurring, numerous experts are continuing their inspections for air and water tightness, concrete strength, weld penetrations, etc. All aspects of this building receive numerous reviews to help monitor the quality of the materials and workmanship.

The construction schedule reaches another milestone on February 2, such that the south tower crane will be dismantled and removed from the job site. This crane will be replaced with a material hoist that will be used to move construction materials up and into the structure at all levels.

The second phase of the pharmacy renovation is nearing 60 percent completion. Additionally, the old main lobby has now been pulled into the construction zone. Re-work of this area to help form the connection between the new building and the existing building is the focus of this work.

Warren Clinic – Springer

Construction continues in the basement of the Springer building. The lab and now the radiology registration/lobby have been completed. The contractor’s attention has now shifted to the large central break room for the employees housed in the building. Exterior signage is to be installed the week of January 14.

Additionally, work will commence on the curbing and re-asphalting of the parking lot. Landscaping will follow in the next several months.

Yale Widening

The construction crews are now forecasting that the Yale roadway will be substantially complete in March along the one mile stretch from 61st Street to 71st Street.

A small retaining wall will be initiated during January along the east side of Yale along the Saint Francis Hospital main entrance drive. Saint Francis Hospital will be responsible for cladding this wall in a limestone brick to match the large retaining walls.

SFH Upcoming Events

- **ACLS Renewal**, January 19, 0800-1700, Saint Francis Education Center
- **ACLS Provider**, January 22-23, 0800-1630, Saint Francis Education Center

Contact the Saint Francis Education Department at 918-494-1190 to register for any of these classes or to get additional information.

New Pediatric Orthopedic Surgeon

Dr. Elizabeth Pickvance will be joining Dr. Mark Willits in the Warren Clinic Pediatric Orthopedic Surgery office later this month. Dr. Pickvance comes to Saint Francis from the Christus Schumpert Health System in Shreveport, Louisiana. The Pediatric Orthopedic Surgery office is located in the Warren Building at 6465 S. Yale Avenue, Suite 420. Their office phone number is 918-502-8810.

OU Pediatric Grand Rounds

Saint Francis Education Center

- **January 8**: Amblyopia and Strabismus; Stephen Groves, MD, Ophthalmologist, His Vision for Children

To extend the presence and healing ministry of Christ in all we do.
Epic—Our New Electronic Medical Record

What is Epic?
Epic is an advanced, industry leading electronic health record system (EHR) for inpatient and ambulatory clinical, ancillary, registration/admitting, scheduling and both hospital and professional billing functions. After its implementation, The Epic system will link all Saint Francis Health System entities, departments and Warren Clinic physician offices.

For our patients, this means their healthcare providers can access one up-to-date medical record regardless of where they are within the health system. For physicians and staff throughout the health system, Epic will integrate all of our systems like never before to produce a level of standardization that decreases variation in care and provides safer, higher-quality, and less-expensive outcomes.

Why is Saint Francis Health System implementing Epic?
With the implementation of Epic, Saint Francis will continue to be at the forefront of healthcare technology and innovation. Through a seamless, completely integrated electronic health record system, the health system will have the opportunity to enhance the safety, quality and efficiency of the care delivery system.

Epic will replace a total of 18 separate systems currently in use throughout the Saint Francis Health System. These include IDX, NextGen, Ulticare and MEDHOST.

Key benefits of Epic include:
- a special electronic physician order entry system that allows for the management and communication of orders and test results;
- a detailed clinical documentation system that will enhance workflow and provides caregivers with easy access to critical information;
- a top-notch system that provides an electronic medication administration record that helps improve patient safety;
- the ability to allow data to move quickly with patients as they navigate the health system from the physician office to the emergency department to testing areas and/or inpatient units;
- the ability to readily communicate and collaborate with referring physicians online with a secure system;
- a secure portal that allows patients to easily access and manage their own health information; and
- a new, more efficient system for appointment scheduling, patient registration, billing and related activities.

Implementation of the EPIC system will be conducted in two phases—the initial phase will principally focus on Saint Francis Hospital, Saint Francis Hospital South, Laureate Psychiatric Clinic and Hospital, and Warren Clinic operations, whereas phase two will focus predominantly on the system’s care management and home care operation(s). Phase one of this project has commenced and it is anticipated that the Warren Clinic implementation will be complete by summer 2014 and the hospitals will be complete by fall 2014.

#### Phase 0
- Executive education
- Project planning
- Interface Conversion and systems analysis
- Project team staffed

#### Phase 1
- Project team attends training
- Finalize project plan
- Initial discovery by Epic team
- Key performance indicators identified

#### Phase 2
- Project team completes certification
- Delivery of Model System
- Begin validation sessions with subject matter experts

#### Phase 3
- Continue validation sessions
- Complete configuration
- Workflow lab interface testing begins
- Data Conversion

#### Phase 4
- Integrated testing using Testing Toolkits
- End users trained using Training Wheels
- Go-live readiness assessments and dress rehearsal

#### Phase 5
- Go-live support
- Post-live visits
- End user surveys
- Ongoing training

#### Phase 6
- Long-term support
- Rollout to additional sites
- Upgrades
